I need to get some info about device and running application. Something like CPU,memory,network,storage. Can any one give some examples how this can be done? A: What you are looking for is called 'background service'. This process will run in background without user interaction. You will find several examples. You could create a service that runs in background using one of these. Q: MATLAB coder: unmathematically equal? I ran this simple code: function X = x x = [10 0 4 20 1 100 20 30 40 60 80]; for idx = 1 : length(x) if x(idx) == 1 X(idx,:) = x(idx); end end y = x; X = y; I think there are no solutions.
